

VeriSign SSL Secure Certificates:

The Web's Most Trusted Security Provider

VeriSign is the SSL Certificate provider of choice for over 93% of the Fortune 500 and the world's 40 largest banks. They trust VeriSign because of our encryption technology and rigorous business authentication practices. When you protect your site with Secure Site and display the VeriSign Secured Seal, your customers know that their transactions are secure and you are who you say you are.

VeriSign Secure Site with EV

Secure Site with EV SSL Certificates protect the transfer of sensitive data on Web sites, intranets, and extranets using a minimum of 40-bit and up to 256-bit encryption. Extended Validation triggers the display of the green address bar verifying the authenticity of the Web site in the latest high-security browsers. These certificates include a \$100,000 warranty and the VeriSign Secured™ Seal.

Customer Confidence in the Green Address Bar

Extended Validation SSL gives Web site visitors an easy and reliable way to extend their trust online. In Microsoft® Internet Explorer 7 (and upcoming releases of Firefox and Opera), the address bar turns green and displays the name of the Extended Validation Certificate owner. The security status bar shows that the transaction is encrypted and the organization has been authenticated according to the most rigorous industry standard. All VeriSign EV SSL Certificates come with EV Upgrader™ (\$300 value) the first ever technology that automatically enables all visiting Windows™ XP clients to experience these interface enhancements with your site. Without EV Upgrader, only Windows Vista clients are sure to see the green address bar.

Features:

- Extended Validation authentication
- From a minimum of 40-bit to a maximum of 256-bit encryption
- VeriSign Secured Seal - the most recognized trust mark in the industry
- EV Upgrader™ enables EV interface on Windows XP clients
- \$100,000 NetSure extended warranty
- Available 24x5 phone, email and chat support
